

PRESS RELEASE

New Barn Door Hardware for Projects from Beyerle US

Beyerle US introduces new budget-friendly stainless steel hardware for glass fabrication which is known on the market

ATLANTA, GA: Beyerle US is proud to have participated for the first time at the GlassBuild AMERICA exhibition, presented by the NGA and WDDA, in Atlanta September 12-14, 2017.

Featured products at the exhibition highlighted Beyerle US's glass door hardware attachments, enabling optimal use of light without compromising privacy. Especially in office spaces, this type of system provides a great option to define space and separate offices, while keeping employees connected. Natural light flows into the divided working spaces allowing employees to experience a naturally lit setting. An added feature is a reduction in artificial light use, so energy saved.

Low-budget hardware in accordance to known glass fabrications

At the GlassBuild AMERICA, Beyerle US presented its new barn door hardware BALUGA in stainless steel. As the glass fabrication is equivalent to known systems on the market, Beyerle US's products showcase a budget friendly, highly-used and regarded, and attractive consideration for architects and designers. The BALUGA hardware for glass doors is especially suited for large projects in offices or hotels. The German engineering team for Beyerle US developed a product that keeps its well-known design, similar to former models such as the Flatec series, with a fair price-tag. The new BALUGA system offers quietly moving trolleys that makes sure glass doors run smoothly and effortlessly. It can either be installed for a glass-to-glass or wall-to-glass configuration and is available in standard track lengths of 82 11/16" and 100".

High quality and low price - all in one product

"As our customers demand high standard and low prices at the same time, and interior environment develop further, we are committed to offer secure and contemporary hardware that match our customers' needs. With the BALUGA, we engineered a product that provides functionality and durability and is committed to our engineering and safety standards", explains Andreas Beyerle,

Managing Director of Beyerle US. “It’s ideal to be installed in big office spaces, conference rooms and hotel rooms where contemporary design is as high criteria as the price.”

In addition, Beyerle US showcased its improved locking ladder pulls. The engineering team has worked over the last month to improve the construction quality and re-engineered the technique for an easier and better functionality.

About Beyerle US LLC/ABP-Beyerle GmbH

ABP-Beyerle is a leading global manufacturer of stainless steel hardware – barn door hardware for glass and wood doors, door handles pulls, shower door fittings, and standoffs – and operates in the United States since more than 10 years under the name of Beyerle US. The family-owned company is headquartered in Germany and serves the US and Canadian market from its office and warehouse in Atlanta, USA. Beyerle designs exclusive products that offer maximum functionality and fit into any interior. As a leader in manufacturing architectural hardware, we are committed to the development and production of quality hardware.
